

SL	Bug ID	Environment	Severity	Priority	Title	Steps to Reproduce	Expected Result	Actual Result	Evidence
1	BG-001	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Empty basket can be submitted as a completed order	1. Do not add any items to the basket. 2. Navigate directly to the Basket/Checkout page. 3. Fill in payment and delivery details. 4. Click 'Confirm Order' / 'Complete Order'.	The system should block checkout and show a message such as 'Your basket is empty' when there are no items.	The order is accepted and confirmed with zero items, and with a £0 / blank total.	Bug1.1 , Bug1
2	BG-002	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	No input validation on payment and billing fields	1. Go to Basket. 2. Enter any arbitrary values into Card Number, Name on Card, Expiration Date, First Name, Last Name, Address and Postcode (letters in numeric fields, symbols, empty values, absurd dates, etc.). 3. Submit the order.	Each field should be validated against its expected format (card number length/digits, valid future expiry date, alphabetic name fields, valid postcode pattern) with inline error messages on invalid input.	Every field accepts any input with no format checks, and the order still completes successfully.	Bug2
3	BG-003	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	CVV field accepts negative numbers and has no length/range limit	1. Go to Basket. 2. In the CVV field, enter a negative number (e.g. -123) or a number with more/fewer than 3 digits. 3. Submit the order.	CVV should only accept 3-4 positive digits and reject anything outside that range.	Negative numbers and numbers of any length are accepted, and the order completes.	Bug3
4	BG-004	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Standard shipping fee calculation produces incorrect / NaN totals	1. Add item(s) to the basket so the subtotal is a whole (non-fractional) number. 2. Select 'Standard Shipping'. 3. Observe the new total. 4. Repeat with a subtotal that is a fractional number (e.g. £12.49).	Shipping should add a fixed, correctly rounded fee (e.g. £1.99) to the subtotal in all cases.	For whole-number subtotals the total becomes roughly '10n + 1.99' (an apparent string-concatenation bug) instead of subtotal + 1.99. For fractional subtotals the total becomes 'NaN'.	Bug4
5	BG-005	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Order total displaying/equal to NaN still completes successfully	1. Trigger the NaN total described in BG-004 (fractional subtotal + standard shipping). 2. Proceed to confirm the order.	Checkout should be blocked and an error shown when the calculated total is not a valid number.	The order is accepted and marked complete even though the displayed total is 'NaN'.	Bug5
6	BG-006	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	High	P1	Basket item quantity can be edited to any value and still checked out	1. Add an item to the basket. 2. Directly edit the quantity field to an invalid value (0, negative, non-numeric, or an extreme number). 3. Proceed to checkout and confirm the order.	Quantity should be restricted to positive whole numbers within available stock, with validation blocking invalid values.	Any value is accepted in the quantity field and the order still processes to completion.	Bug6
7	BG-007	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	No password strength/format validation on account creation	1. Go to Login. 2. Enter the tooltip Email for the website. 3. Enter any password (e.g. a single character, or blank-like input) with no complexity. 4. Submit and then log in with that password.	Password should be required to meet a minimum length/complexity policy, enforced at sign-up.	Any password is accepted and the account is created and can be logged into successfully.	Bug7
8	BG-008	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	User can log into a second account without logging out of the first	1. Log in as User A. 2. Without logging out, navigate to the Login page again. 3. Enter credentials for User B and submit.	The app should either block this or cleanly end User A's session before starting User B's session.	User B is logged in while remnants of User A's session/data remain active, leading to session confusion (see BG-009, BG-010, BG-011).	Bug8
9	BG-009	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Basket contents leak between different user accounts	1. Log in as User A and add an item to the basket. 2. Log in as User B (see BG-008). 3. Open the Basket page.	User B's basket should be empty / independent of User A's basket.	User B's basket still shows the item added by User A.	Bug9
10	BG-010	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Support chat history leaks between different user accounts	1. Log in as User A and start/exchange messages in the Support chat. 2. Log in as User B (see BG-008). 3. Open the Support chat.	User B should see their own (empty or independent) chat history only.	User B sees User A's previous support conversation - a data privacy leak between accounts.	Bug10
11	BG-011	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Refreshing the page after login shows glitched / mismatched account info	1. Log in to an account. 2. Refresh the browser page.	The logged-in user's correct information should persist and reload consistently.	Account information becomes inconsistent/glitched and can show different information than before the refresh.	Bug11
12	BG-012	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	High	P1	Placed orders do not appear in the order history while logged in	1. Log in to an account. 2. Complete a purchase. 3. Navigate to 'Previous Orders' / Order List.	The newly placed order should appear in the logged-in user's order history.	The order list does not update to include the new order.	Bug12
13	BG-013	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P2	Sorting the order history table scrambles row data	1. Go to Previous Orders (with 3+ orders listed). 2. Click the 'Order Number', 'Date Ordered', 'Order Description' or 'Order Total' column header to sort. 3. Observe row order.	Clicking a column header should sort all rows correctly and keep each row's data (number, date, description, total) together.	Sorting misplaces rows - e.g. the first row moves to the last position and the second row moves to second-last, rather than a correct sort.	Bug13

SL	Bug ID	Environment	Severity	Priority	Title	Steps to Reproduce	Expected Result	Actual Result	Evidence
14	BG-014	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P2	Already logged-in users are still redirected to the Login page	1. Log in to an account. 2. Click the 'Login' link/button in the navigation.	A logged-in user clicking Login should be redirected to their account page, or the link should not prompt another login.	The app asks the user to log in again even though they are already authenticated.	Bug14
15	BG-015	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	High	P2	Navigating from Basket to the About page returns 'Page Not Found'	1. Open the Basket page. 2. Click the 'About' navigation link.	The About page should load normally.	A 'page not found' error is shown instead of the About page.	Bug15
16	BG-016	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P3	No custom 404 / 'Page Not Found' page	1. Navigate to any invalid/non-existent URL on the site, or trigger BG-015.	A branded, user-friendly 404 page with navigation back to the site should be shown.	No proper 404 page is implemented.	Bug16
17	BG-017	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P2	Social login buttons (Twitter, Facebook, LinkedIn) are non-functional	1. Go to the Login page. 2. Click the Twitter, Facebook, or LinkedIn login buttons.	Each button should initiate the respective OAuth login flow (or be removed if not supported).	None of the three social login buttons perform any action.	Bug17
18	BG-018	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P2	Support chat history is lost on page reload	1. Open Support chat and exchange a few messages with the bot/agent. 2. Reload the page.	Prior chat messages (both user and support side) should persist after reload.	Only the user's own messages remain visible; all support/agent replies disappear.	Bug18
19	BG-019	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Low	P4	Support chat widget can only be closed via the close (x) icon	1. Open the Support chat widget. 2. Try to dismiss it by clicking outside the widget, pressing Escape, or other common dismissal actions.	Standard dismissal actions (click-outside, Escape key) should also close the widget for better usability.	The widget only closes when the user clicks the explicit 'x' close icon.	Bug19
20	BG-020	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Low	P4	Basket page name and card details input fields have no placeholder text	1. Open the Basket. 2. Inspect each input field (name, card details, etc.).	Each field should show helpful placeholder text (e.g. 'MM/YY', 'e.g. John') to guide correct input.	No fields display placeholder/example text.	Bug20
21	BG-021	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P2	Quantity cannot be adjusted directly - item must be deleted and re-added	1. Add an item to the basket. 2. Try to increase/decrease its quantity using the basket's quantity control.	The quantity control (+/- or input field) should update the quantity in place.	Adjusting quantity has no effect; the item must be removed entirely and re-added with the desired quantity.	Bug21
22	BG-022	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Low	P3	Stale checkout instruction text remains after order is placed	1. Complete an order through checkout. 2. Observe the confirmation/basket header area.	After order confirmation, the pre-checkout instruction ("Please check your order details and then enter your payment and delivery details") should be replaced or removed.	The instruction text remains visible on the page after the order has already been placed.	Bug22
23	BG-023	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Low	P3	Header disappears immediately on scrolling down	1. Open any page with content taller than the viewport. 2. Scroll down slightly.	The header should remain visible, or behave as a predictable sticky/collapsing header.	The header disappears as soon as the page is scrolled, with no clear sticky behavior.	Bug23
24	BG-024	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Low	P4	'Login' text is low-contrast and nearly illegible against the background	1. Open the Login page. 2. Observe the 'Login' heading/label against the background.	Text should meet basic contrast/accessibility standards (e.g. WCAG AA) against its background.	The 'Login' text blends into the background color, making it hard to read.	Bug24
25	BG-025	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Medium	P3	Product image fails to load (Wham Bars)	1. Browse the product catalogue. 2. Locate the 'Wham Bars' product.	The product image should load and display correctly.	The image fails to load, showing a broken-image icon in its place.	Bug25
26	BG-026	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	Critical	P1	Navigation links return 'Page Not Found' on mobile viewport (Pixel 9 emulation)	1. Open the site in Chrome on a PC. 2. Open DevTools (Inspect) → toggle device toolbar → select Pixel 9. 3. Tap/click any navigation link (header/footer menu items). 4. Observe the result.	Each navigation link should redirect to its corresponding page, consistent with desktop behavior.	Tapping any navigation link shows a "Page Not Found" error instead of redirecting correctly — navigation is effectively broken at this mobile viewport.	Bug26

SL	Bug ID	Environment	Severity	Priority	Title	Steps to Reproduce	Expected Result	Actual Result	Evidence
27	BG-027	OS: Windows 11 Browser: Google Chrome Browser Version: Version 153.0.8010.53 (Official Build) (64-bit)	High	P2	No logout option available for logged-in users	1. Log in to an account. 2. Look for a 'Logout' / 'Sign Out' option in the header, navigation menu, account/profile menu, or footer.	A clearly accessible 'Logout' option should be available so the user can end their session on demand.	No logout option could be found anywhere in the UI — the user has no way to explicitly end their session.
